

# Using August with Client Matters

August is an enterprise-grade AI platform built specifically for law firms and in-house legal teams, delivering isolated single-tenant deployments, strict confidentiality, and full control over data, residency, and auditability.

Backed by ISO 27001:2022, SOC 2 Type II, and independent penetration testing, August provides private cloud or VPC/on-prem options, zero training on customer data, encryption everywhere, and a model-agnostic secure gateway for policy enforcement and audit logging. Firms rely on August's robust security architecture—SSO with MFA and SCIM, ethical walls, matter-level access controls, secure SDLC practices, continuous monitoring, and tested IR/BCDR plans—along with seamless integrations for Microsoft Word/Outlook and leading DMS platforms. Purpose-built for sensitive legal work, August combines uncompromising security with the flexibility and control modern legal teams require.
